Subject: RE: IBOP Medical Marijuana July 21, 2009

RECEIVED
JUL 21 2009
IOWA BOARD OF PHARMACY

To Whom It May Concern;

I suffer from chronic nausea, vomiting and Wasting Syndrome due to Diabetic Neuropathic Gastroparesis. I have been on Marinol but it simply does not work. The only help my doctors can give me is Reglan/Metoclopramide for chronic nausea and vomiting control. As my digestive specialist handed me my Reglan prescription he said, "Do not take Reglan/Metoclopramide on a regular basis for it causes 'irreversible Parkinson like shakes and tremors.' Though rarer it also causes "Neuroleptic Malignant Syndrome" which is fatal. Marijuana, with the longest medical history of any drug since 2700 B.C., has no serious side effects.

Inhaled marijuana vapors gives me immediate relief from chronic nausea and vomiting. Vaporizing removes all tars and carcinogens and other health hazards associated with smoking.

I beg of you, "**jump off the bridge**" you will find that you are only one inch above the water, landing on the sure footing of science for Medical Marijuana.

Yours in Christ, Jeffrey D. Elton
